SUMMARY

Backend engineer with nearly two years of professional experience: production REST APIs on Node.js/Express and MongoDB, plus Java 17/Spring Boot 3 with MySQL. Sole backend developer of **Jurident**, an AI legal-tech platform serving 10,000+ lawyers that won the MSME Hackathon and a 95% government grant. Now a Software Engineer at **LTIMindtree**, analysing application network traffic for a Google security engagement.

EXPERIENCE

Software Engineer, LTIMindtree

Sep 2025 – Present

- **Google client engagement, application security analysis:** analyse ~10 applications a day, capturing and inspecting their network traffic and API calls with Wireshark and HTTP Toolkit to identify and report malicious behaviour.
- Completed LTIMindtree's Java full-stack training (Java 17, Spring Boot 3, Spring Security, Angular 16) and delivered the EstateConnect capstone (see Projects).

Backend Developer, Valsco Technology

Jan 2025 – Aug 2025

Jurident, AI legal-tech platform (jurident.com) · Node.js, Express, MongoDB, Redis, OpenAI API, DigitalOcean

- **Sole backend developer:** designed, built and deployed the Node.js/Express + MongoDB backend on DigitalOcean, owning API design, data modelling and integrations for a platform serving 10,000+ lawyers.
- Built High Court and District Court case-status lookups on the eCourts portals, which have no public API. The service relays the portal's session cookie and CAPTCHA to the user, replays the session against the case-query endpoint and returns normalised JSON. Handles 500+ lookups a day.
- Used the same approach (form submit + Cheerio parsing) to verify advocate enrolment with the Bar Council of Delhi.
- Built JuriAssistance, an in-app legal assistant on the OpenAI API that answers common user questions.
- Profiled slow endpoints, then added MongoDB indexes for the slow query patterns and a Redis cache for repeated reads.

PROJECTS

EstateConnect, real-estate platform (LTIMindtree training capstone)

2025 – 26

Java 17, Spring Boot 3, Spring Security, Spring Data JPA, Hibernate, MySQL, Angular 16, TypeScript

- Built a 22-endpoint REST API across auth, property, inquiry, feedback and AI-assistant modules in a layered controller–service–repository design. Modelled 5 JPA/Hibernate entities with @ManyToOne relations and derived queries, and mapped domain exceptions to HTTP status codes (409 duplicate, 400 invalid OTP).
- Implemented JWT authentication in Spring Security with a custom OncePerRequestFilter and BCrypt password hashing. An Angular HTTP interceptor attaches the Bearer token to API calls.
- Added signup email OTP via Spring Mail (SMTP/STARTTLS): single-use SecureRandom codes with a 5-minute expiry.
- Built 23 Angular components, including an admin inquiry dashboard (pending and high-priority views), property search with filters and price sorting, an EMI calculator and a Gemini-powered assistant.

SKILLS

Languages: Java 17, JavaScript, TypeScript, SQL, C++

Backend: Node.js, Express, Spring Boot 3, Spring Security, Spring Data JPA, Hibernate, REST API design, JWT

Data: MongoDB (indexing), MySQL, Redis (caching)

Frontend: React, Angular 16

Integrations: OpenAI API, Google Gemini API, Spring Mail (SMTP), Cheerio (HTML parsing)

Tools: Git, GitHub, Postman, Wireshark, HTTP Toolkit, DigitalOcean

EDUCATION

B.Tech, Computer Science & Engineering, Graphic Era University, Dehradun · CGPA 7.9/10 — 2021 – 2025

ACHIEVEMENTS & CERTIFICATIONS

- MSME Hackathon winner with the Jurident team (government grant covering 95% of project funding) · 400+ DSA problems solved on LeetCode, peak contest rating 1733.
- Certifications: Generative AI (Google); API Fundamentals (Postman).
